

Sheep-washing Apparatus. A mechanical arrangement to cleanse wool before shearing.

Fig. 4952.

Fig. 4952 shows a form of animal shower-bath used in Hungary for this purpose. The sheep are soaked in a stream until the grease and dirty covering of the wool are loosened. The sheep are then driven into the pen *e* and thoroughly drenched by a stream from hose *d*, which is supplied from one of the wooden pipes *c c*. *b* is a tank which gives the

Sheep-Washing Apparatus.
