
NEW INVENTIONS.

Newly Invented Loom.

A very important improvement has been made within a few months, in a loom for weaving, by Mr. Edward Norfolk, a young machinist of Boston. The principal improvement is in the movement of the shuttle, which, by this process, is effected entirely without noise. A very considerable addition also is made to the speed of the loom.

After some time spent in experimenting this machine, a patent was obtained, and a working loom put in operation at the James Mills, in Newburyport. The trial was said to be perfectly satisfactory.
