

<http://www.asteroidmission.org/>

The Lunar and Planetary Laboratory, University of Arizona, is looking for two highly motivated students to work directly with the OSIRIS-REx Science Processing Operations Center. OSIRIS-REx is a four year NASA mission to perform an unprecedented survey of a carbonaceous asteroid, collect a sample from the surface, and return the sample back to Earth.

Students will be hands-on working directly with flight-data, scientists, and other developers to create, version control, and test software that will be directly responsible for planning the future of the mission. Experience with C/C++, Javascript, Java, HTML, GIT, and SVN is a definite plus. Students should have good communications skills and work well in a team.

To apply, send your resume to Sanford Selznick:  
[sanford@orex.lpl.arizona.edu](mailto:sanford@orex.lpl.arizona.edu).

Please respond no later than September 16.
