

Job Title: Website Development Specialist

## Job description

Assist with web design aspects of establishing a new and innovative website for helping those living with, treating and/or researching childhood epilepsy. This interactive website will facilitate communication among families, physicians and scientists, and serve as a repository of the latest information about epilepsy caused by mutations in the SCN8A gene.

By working with us on this website you will not only help others in the SCN8A community, you will help to build a new model for advancing support, knowledge and care for a variety of diseases worldwide. We are specifically looking for a person with web graphic design experience who can work with a team of programmers to add creative design aspects to the functionality of the site.

The incumbent should have experience with HTML, CSS, Bootstrap, Photoshop and experience with one or more javascript libraries such as JQuery within the context of [asp.net/telerik](http://asp.net/telerik). Skills required: HTML, CSS, Bootstrap, Photoshop, JQuery/Javascript. Desired Skills: Dreamweaver and experience in use of Microsoft products ([asp.net](http://asp.net), telerik, Visual Studio etc.)

Please send email to Michael Hammer, [mfh@email.arizona.edu](mailto:mfh@email.arizona.edu), including a cover letter describing why you are interested in this position, and a resume that includes your experience and skills that are required/desired for this position.

Start date: ASAP

Duration: 1 year (or longer)

Salary: DOE (\$14-\$16/hr)
